

Zomato Restaurant Data Analysis Dashboard

Restaurant Analytics Dashboard using Python, Pandas & Matplotlib

Project Story

Restaurant businesses need to understand customer preferences to improve services and attract more customers. This project analyzes Zomato restaurant data using Python, Pandas, and Matplotlib to uncover trends in restaurant ratings, cuisine popularity, customer engagement, and restaurant performance. The dashboard transforms raw data into meaningful insights that support data-driven business decisions.

Business Problem

- Which restaurants are the most popular?
- Which restaurants receive the highest ratings?
- Which cuisines are preferred by customers?
- Do highly rated restaurants receive more customer votes?
- How are restaurant ratings distributed?

Technologies Used

Python

Pandas

Matplotlib

VS Code

Dashboard Visualizations

Visualization	Purpose	Business Insight
Top 10 Restaurants by Votes	Identify popular restaurants	Shows restaurants with highest customer engagement.
Top 5 Cuisine Distribution	Analyze cuisine popularity	Identifies customer food preferences.
Top Rated Restaurants	Compare restaurant quality	Highlights restaurants with excellent customer satisfaction.
Restaurant Rating Distribution	Analyze rating trends	Shows distribution of ratings across restaurants.
Votes vs Ratings	Correlation analysis	Examines relationship between popularity and ratings.

Dashboard Preview

Key Findings

- Customer votes are concentrated among a few restaurants.
- Some cuisines dominate the restaurant market.
- Higher-rated restaurants generally attract more customer votes.
- Most restaurants receive ratings within a consistent range.

Business Value

- Understand customer preferences
- Identify high-performing restaurants
- Improve marketing strategies
- Optimize menu offerings
- Support data-driven decision making

Skills Demonstrated

- Data Cleaning
- Exploratory Data Analysis (EDA)
- Data Visualization
- Dashboard Design
- Business Analytics
- Python Programming
- Data Storytelling

Portfolio Summary

This project demonstrates my ability to transform raw restaurant data into meaningful business insights using Python. The dashboard combines multiple visualizations to support data-driven decision-making and effectively communicate analytical findings.
